

Acme Robotics

AI-Native Robotics Platform

Seed Round Pitch Deck - Q1 2024

The Problem

Industrial robots are expensive and data-hungry

- Training requires 6-12 months of real-world data collection
- Deployment costs exceed \$500K per robot
- Each new task requires complete retraining
- Limited adaptability to changing environments

Our Solution

Synthetic data generation for rapid robot training

- Proprietary simulation environment
- 10x faster deployment than traditional methods
- 80% cost reduction in training phase
- Transfer learning across multiple tasks

Product

End-to-end robotics training platform

1. Synthetic Data Generator

- Physics-based simulation
- Realistic environment modeling

2. Training Engine

- Reinforcement learning algorithms
- Transfer learning capabilities

3. Deployment Tools

- Real-time adaptation
- Performance monitoring

Traction

Early adoption and strong pipeline

- 2 pilot customers in automotive manufacturing
- \$250K in committed ARR for 2025
- 15,000 hours of simulation data generated
- 5 additional LOIs in advanced discussions
- 95% customer satisfaction score

Team

World-class robotics and AI expertise

Sarah Chen - CEO

- Ex-DeepMind, led robotics research team
- PhD in Robotics from MIT

Mike Rodriguez - CTO

- Former Tesla Autopilot engineer
- MS in Computer Science from Stanford

Advisory Board:

- Prof. James Lee (MIT Robotics Lab)
- Dr. Emily Watson (Google AI)

Market Opportunity

Large and rapidly growing market

TAM: \$8.3B addressable market

SAM: \$2.1B serviceable market

SOM: \$210M serviceable obtainable market (10% of SAM)

Market Growth:

- Growing at 19% CAGR
- Accelerated by labor shortage
- Driven by AI advances

Business Model

SaaS + Usage-based pricing

Revenue Streams:

- Platform subscription: \$50K-\$200K/year
- Simulation credits: \$0.10 per hour
- Professional services: \$200/hour

Unit Economics:

- Average contract value: \$150K
- Gross margin: 85%
- CAC payback: 9 months

Competitive Landscape

Clear differentiation in the market

Traditional Robotics Companies:

- Slow, expensive manual training
- Limited adaptability

Simulation Software Vendors:

- Generic tools, not robotics-specific
- No end-to-end training solution

Our Advantage:

- 10x faster training
- Integrated platform
- Proprietary transfer learning

Competitive Moat

Strong defensibility

Technology:

- Proprietary simulation engine (3 years of R&D)
- 2 patents filed, 3 more in process

Data:

- Growing dataset of robot behaviors
- Network effects from each deployment

Partnerships:

- Strategic relationships with robot manufacturers

Financial Projections

Path to profitability

2024: \$250K revenue

2025: \$1.2M revenue (380% growth)

2026: \$4.5M revenue (275% growth)

2027: \$12M revenue (167% growth)

Break-even expected: Q3 2026

The Ask

Raising \$2M Seed Round

Use of Funds:

- Engineering: \$1.0M (50%)
- Sales & Marketing: \$600K (30%)
- Operations: \$400K (20%)

Milestones:

- 10 paying customers by Q4 2024
- \$1M ARR by Q2 2025
- Series A ready by Q4 2025

Key Risks & Mitigation

Technology Risk:

- Sim-to-real transfer may not generalize
- Mitigation: Extensive testing, gradual rollout

Market Risk:

- Slow enterprise adoption
- Mitigation: Focus on early adopters, pilot programs

Competitive Risk:

- Large players entering the space
- Mitigation: Speed to market, IP protection

Thank You

Let's Build the Future of Robotics
